Graded quiz on Cartesian Plane and Types of Function

CALIFICACIÓN DEL ÚLTIMO ENVÍO
84.61%

1. Which of the following points in the Cartesian Plane have positive x-coordinate and negative y-coordinate? — 1 / 1 puntos

- $(5, 7)$
- $(-4, 5)$
- $(0, 0)$
- ● $(7, -1)$

✓ Correct
The x-coordinate, 7, is positive, and the y-coordinate, -1, is negative.

2. Which of the following points is in the first quadrant of the Cartesian Plane? — 1 / 1 puntos

- $(-5, 1)$
- $(-4, -7)$
- ● $(7, 11)$
- $(5, -1)$

✓ Correct
The first quadrant is defined to be all points in the Cartesian plane whose coordinates are both positive.

3. Let A, B, C, D be points in the Cartesian Plane, and let the set $S = \{B, C, D\}$ — 1 / 1 puntos

Suppose that the distances from A to B, C, D are $5.3, 2.1$, and 11.75, respectively.

Which of the following points is the nearest neighbor to the point A in the set S?

- D
- B
- ● C
- A

✓ Correct
The distance from A to C is 2.1 and that is smaller than the distance from A to any other element of S.

4. Find the distance between the points $A = (2, 2)$ and $B = (-1, -2)$. — 0 / 1 puntos

- -25
- 5
- 25
- ● 1

! Incorrect
If you got here, you probably got confused between negative and positive numbers in arithmetic.

5. Find the slope of the line segment between the points $A = (0, 1)$ and $B = (1, 0)$. — 1 / 1 puntos

- ● -1
- 1
- $\sqrt{2}$
- 0

✓ Correct
The slope of this line segment is $\frac{0-1}{1-0} = -1$

6. Find the point-slope form of the equation of the line with slope -2 that goes through the point $(5, 4)$. — 1 / 1 puntos

- $y - 4 = 2(x - 5)$
- $y - 5 = -2(x - 4)$
- $(5, 4)$
- ● $y - 4 = -2(x - 5)$

✓ Correct
The point-slope form for the equation of a line with slope m that goes through the point (x_0, y_0) is $y - y_0 = m(x - x_0)$.

In this case, the slope $m = -2$ is given and the point $(5, 4)$ on the line is given.

7. Which of the following equations is for a line with the same slope as $y = -3x + 2$? — 1 / 1 puntos

- $y = 5x$
- $y = 5x + 2$
- ● $y = -3x - 8$
- $y = 8x - 3$

✓ Correct
The slope-intercept formula for a line is $y = mx + b$, where m is the slope and b is the y-coordinate of the point where the line hits the y-axis.

This line has slope $m = -3$ which is the same slope as the given line.

8. Which of the following equations is for a line with the same y-intercept as $y = -3x + 2$? — 1 / 1 puntos

- ● $y = 5x + 2$
- $y = 8x - 3$
- $y = 5x$
- $y = -3x - 8$

✓ Correct
The the slope-intercept formula for a line is $y = mx + b$, where m is the slope and b is the y-coordinate of the point where the line hits the y-axis. This line has a y-intercept of 2 which is the same as the given line.

9. How many lines contain both the point $A = (1, 1)$ and the point $B = (2, 2)$? — 1 / 1 puntos

- infinitely many
- 2
- ● 1
- None

✓ Correct
The line with equation $y = x$ is the one and only line that meets the stated requirements.

10. Suppose that we have two sets, $A = \{a, b\}$ and $Z = \{x, y\}$. How many different functions $F : A \to Z$ are possible? — 0 / 1 puntos

- 4
- ● There are infinitely many
- There are none
- 1

! Incorrect
The set A is finite, and each element in A can only be transformed into finitely many choices of element in Z.

11. How many graphs contain both the point $A = (0, 0)$ and the point $B = (1, 1)$ — 1 / 1 puntos

- 1
- ● Infinitely many
- None
- 2

✓ Correct
The graphs of $f(x) = x, g(x) = x^2, h(x) = x^3, s(x) = x^4, \ldots$ all contain both A and B

12. Suppose that $g : \mathbb{R} \to \mathbb{R}$ is a continuous function whose graph intersects the x-axis more than once. Which of the following statements is true? — 1 / 1 puntos

- g is strictly increasing.
- ● g is neither strictly increasing nor strictly decreasing.
- All of the above.
- g is strictly decreasing.

✓ Correct
The function g fails the horizontal line test, so it can neither be strictly increasing nor strictly decreasing.

13. Find the slope of the line segment between the points $A = (1, 1)$ and $B = (5, 3)$. — 1 / 1 puntos

- 4
- $\sqrt{20}$
- 2
- ● $\frac{1}{2}$

✓ Correct
The slope of this line segment is $\frac{3-1}{5-1} = \frac{1}{2}$, where $3 - 1$ is the rise and $5 - 1$ is the run.
